

# LEWIS COUNTY CHAPTER OF OLYMPIA MASTER BUILDERS

## Routine Home Maintenance to Keep Your Home Safe and Sound

Your home may be the biggest investment you will ever make. Taking good care of it with regular maintenance is necessary to preserve its value and ensure it will provide a comfortable, safe shelter for you and your family for years to come.

### Maintenance Inside the Home

#### Air Filters

Many types of heating and air conditioning systems contain filters to remove dirt and dust from the air. Check the instruction book or search online by model number: In many cases, the home owner should change filters at least every three months.

#### Sinks

It's also a good idea to clean your faucet's aerator — which is the spring inside the end of the faucet — every three to four months.

To maintain your garbage disposal, you should run cold water through it during use.

#### Fireplaces

When you're ready to use

your fireplace, be sure to build the fire on the andirons or grate, never on the fireplace floor.

To prevent soot and to add color to the fire, throw in a handful of salt.

Store your firewood outside, away from the house and not directly on the ground.

Have a CSIA-Certified chimney sweep inspect your chimney and fireplace annually, especially if you build a lot of fires in the winter.

#### Floors

To maintain unpainted concrete floors in your basement or garage, first apply a concrete sealer, which makes them easier to clean. When you're ready to clean them, use a solution of four to six tablespoons of washing soda in a gallon of hot water. Add scouring powder to the solution for tough jobs.

For hardwood, be sure the floors have a polyurethane finish before cleaning with water. Hardwood floors that do not have a polyurethane finish will need to be waxed periodically. Use liquid or paste "spirit" wax. The best polish for vinyl floors is water emulsion wax.

#### Walls

Masonry walls sometimes develop a white powdery substance. This is called efflorescence, a crystallized soluble salt that can be removed by scrubbing with water and a stiff brush.

#### Safety and Security

If you have a home security system, regularly check the alarms and circuit breakers to ensure they are in working order. Inspect the sensors one by one.

The batteries in your smoke and carbon monoxide detectors should also be checked twice a year to ensure they are operable. Hard-wired and battery-powered detectors should be replaced every 10 years.

### Maintenance Outside the Home

#### Roof, Gutters and Downspouts

A qualified roofer should inspect your roof every three years. Skylights should also be inspected each time your roof is inspected so leaks don't develop from cracks and interruptions around the seals, caulking and flashings.

Make sure that gutters and

downspouts do not get clogged with leaves or other objects.

#### Windows and Doors

Inspect exterior windows and doors yearly to see if the caulking around them has split and cracked. If so, replace the caulk and clean any mildew.

For a simple solution to wash extremely dirty exterior windows, combine equal parts vinegar and water or three tablespoons of denatured alcohol per quart of warm water. Use a piece of crumpled newspaper to wash the glass to avoid lint left behind by paper towels.

To help a window slide easily, rub the channel with a piece of paraffin.

#### Siding

Inspect your siding yearly to determine if your wood-sided home needs to be repainted. Trim shrubbery away so that it does not touch the siding.

The exterior of your house is built to withstand exposure to the elements, but a periodic cleaning will improve the appearance and, in many instances, prolong the life of siding and other exterior products.

#### Garage

The moving parts of garage

doors should be oiled every three months.

### Simple Repairs

#### Faucets, Sinks and Toilets

If you have a water leak, the washer in your faucet usually needs to be replaced.

For clogged drains, use a plunger and/or a plumber's snake.

To unclog a toilet, use a coil spring-steel auger, which can be found at hardware or home-improvement stores.

#### Pipes

Noisy water pipes should be fixed promptly. The condition that causes noisy pipes may be accompanied by vibration that can cause fittings to loosen and leak.

Frozen pipes should be thawed slowly to prevent the formation of steam, which could cause the pipes to burst.

#### Walls

Use spackling to fill nail holes and cracks in plaster walls and gypsum wallboard.

## Why Hire Members of the Olympia Master Builders?

Olympia Master Builders (OMB) has been providing support for the local building industry since 1959 and now has over 480 members in the Thurston, Lewis, Mason, Grays Harbor, and Pacific counties.

The primary goal of Olympia Master Builders is to provide affordable housing for all economic segments of society. This is achieved by improving the construction industry and the business climate in which our members operate. We do this through:

- **ADVOCACY:** Providing a voice before government.
- **EDUCATION:** Developing a professional building industry.
- **PROMOTION:** Marketing member services.

By hiring members of the Olympia Master Builders, you

are helping support affordable housing efforts in your community. We strive to keep building costs down so you and your neighbors can afford to build new homes, remodel homes within a reasonable budget and support opportunities for more housing in your area.

Please take a few minutes to check out OMB's new and improved online, searchable database giving you the ability to email details about your project to several contractors at once.

Whether you are looking for a builder, remodeler, plumber, electrician, flooring specialist, banker, title company, roofer, cabinet specialist, duct cleaning company, or any other home-building-related product or service provider, OMB is your single source for any home-related needs.
